## Overview

mSlotMachine is a J2ME™ (Java™) game that runs on cellular phones and other small devices (ex. PDA).

The money won or lost is virtual money and no real money is ever lost or won.

## Machines

There are two themed machines: Fruit and Space.

Both machine themes have the same payouts and odds, so play the machine you think is the most fun.

Generally, the spin of the reels is random on each “pull” and is not machine specific. Your best bet is to play a machine with the large jackpot, so you can maximize your win if you hit the jackpot (see Jackpot section below).

## Bankroll

In order to bet you need some credits to bet with. The bankroll is the current amount of credits you can use on any machine.

When you install mSlotMachine you are given 1000 credits as a starting point. Later, if you have less than 100 credits (i.e. you lost over 900 credits) and you try to add 100 credits to a machine, then 1000 credits will automatically be added to your bankroll. This would make your total investment 2000 credits and your current available credits (a.k.a. bankroll) 1000 credits.

The difference between your total investment and your bankroll is your total winnings or losses.

You can move credits from your bankroll to a machine in 100 credit increments. This is done for you automatically or you can do it manually. If there are not enough credits to bet with, 100 credits are automatically deducted from your bankroll, so you can continue to play.

If you cash out, all your credits on the current machine will be added to your bankroll and there will be zero credits on the machine. You can always play the machine again by adding 100 credits to it.

## Payouts

The reel layout and payouts are based on classic \$1 slot machines. To determine your payout use the tables below, as follows:

1. Select the table for your machine: Fruit or Space themed.
2. Find the row that matches the symbols on the machine. Symbols can be in any order. If no match is found, then you lost your bet.
3. Find the intersection of your matching symbol row with your bet: 1, 2 or 3 credits. This is your payout.

## Jackpots

Jackpots are very hard to win, since they require three 7's and the 7's only occur once on each reel. If you win a jackpot you are a very lucky person and we'd like to hear from you. Please send us a message via our "Contact Us" web page or via email at [Inquire@clarisource.com](mailto:Inquire@clarisource.com).

Some general facts about jackpots:

- Each new machine has a random jackpot.
- Each time you win, the jackpot decreases by the amount of your win.

- Each time you lose, the jackpot increases by the amount of your bet.
- When you win a jackpot, you get a percentage of it based on your bet (ex. bet 1 to get 33%, bet 2 to get 66%, bet 3 to get 100%).

## Troubleshooting

The table below lists problems and possible solutions.

Problem	Possible Solution
I accidentally uninstalled the mSlotMachine application.	Please contact your mobile service provider to obtain a new copy of the software. All data winnings, losses, and machines are lost on uninstall.
I can't figure out how to fund my account.	There are no accounts. All money is virtual. No real money is involved. Please read the "Bankroll" section of this document.
